617-909-8404 | Scituate, MA

Professional Summary:

Quantitative Developer with 10+ years writing Python research infrastructure for systematic equity - from investment thesis through strategy design, backtesting, and live trading. Built and maintained the research APIs, numerical libraries, and data pipelines that backed \$200M+ AUM in leveraged long/short strategies. Strong background in distributed computing (SLURM, Dask) across SQL, partitioned Parquet, and NoSQL data stores.

Technical Skills:

- **Programming & Data:** Python (NumPy, Pandas, Scikit-learn, Dask, CVXPY, Gurobi), R, C#, SQL (T-SQL, MySQL, Snowflake)
- **Data Engineering & Distributed:** Dask, SLURM, AWS, ETL pipelines, real-time data ingestion, S3, MongoDB, Redis
- **Financial Data APIs & Tools:** Bloomberg API, Refinitiv QAI, Charles River OMS, Axioma, Northfield
- **Quant & Numerical:** Factor models, time-series analysis, cross-sectional regression, portfolio optimization, ML techniques

Experience:

Acadian Asset Management - Equity Alternatives | Boston, MA

VP, Portfolio Manager | 2022 - Present

- Built the \$200M+ AUM research platform from scratch: investment thesis, strategy design, backtesting, and live trading.
- Wrote the Python backtesting and portfolio analytics libraries used across Equity Alternatives research, portfolio construction and trading.
- Built Python risk model libraries for rebalancing, stress testing, and risk decomposition.
- Collaborated with trading and treasury teams to ensure execution efficiency and cost minimization.
- Built alpha attribution and risk analytics APIs for multi-prime leveraged portfolio reporting.

Acadian Asset Management - Model Integration (Equity Alternatives) | Boston, MA

AVP, Senior Analyst -> VP, Senior Analyst -> VP, Lead Analyst | 2017 - 2022

- Built Equity Alternatives research platform: signal APIs, analytics libraries, and factor model testing frameworks.
- Wrote data pipelines and abstraction layers for equity universes, factor data, and portfolio metrics.
- Automated risk, position, and exposure reporting via Bloomberg API and internal trading system integrations.
- Provided technical guidance and support on research platform development and workflows.

Acadian Asset Management - IT / Data Engineering | Boston, MA

Senior Software Engineer -> AVP, Manager, Software Engineering | 2012 - 2017

- Led a team of 7 engineers modernizing data pipelines, reporting infrastructure, and analytics platforms for front-office users.
- Built operational data stores and analytics APIs used by research and trading teams.
- Introduced code review, unit testing, and CI/CD standards across the team.

Monster.com | Cambridge, MA

Developer -> Senior Data Warehouse Developer -> Manager | 2008 - 2012

- Managed global data warehouse team (12 engineers) delivering analytics pipelines and data marts.
- Built large-scale data processing pipelines for customer-facing analytics.

Southworth International | Portland, ME

Systems Technician -> Senior Systems Technician -> Developer/Administration -> Applications Developer II | 2000 - 2008

- Built and maintained ERP integration systems, operational data stores, and custom analytics solutions.

Education:

- **Northeastern University** - Bachelor of Science - BS, Analytics | 2023
- **SMTC** - Associates Degree - AS, Computer Technology | 2000
